The last scholarship announcement for DER research experiments of DERri Apply until the 30th of November, 2012

Dear researcher,

Are you looking for the right kind of facility to carry out your experiments? *Distributed Energy Resources Research Infrastructures* (DERri) offers a unique opportunity to supplement your ongoing research project in DER research laboratories' installations.

Various testing installations available

The testing installations are provided by research institutes which are among the best in Europe in the field of Distributed Energy Resources. Whether your main focus is, for example, in smart grids; various renewable energy sources; storage; power quality; security of the grid; control and protection of the networks; communication; system aspects; architectural questions or domotics, you will be guided to the most suitable laboratory.

For Universities, Research centres, Companies and Organisations

Applications are eligible from different fields of study and various organisations: the leader of your user group and the majority of the users must work in an institution established in a European Union member state or in an Associated Country. The desired host, however, has to be located in a country other than that of the leader's organisation. The starting time and the length of your project are flexible.

FREE OF CHARGE

DERri is supported by the 7th Framework programme of the European Commission. Access and use of the installations is absolutely free of charge for users. All expenses, including travel and accommodation are reimbursable, under the conditions agreed with the hosting infrastructure.

Submit your application until 30th November 2012!
